ORBIT

Autonomous Operations Brain For Tech Communities

Team Name - Merge Conflict

Team Members :

1. Satyam Gupta
2. Deepak Kumar

Problem Statement

WHAT problem are you solving?

India has 500+ active tech communities, but managing them is still largely manual.

Community managers must:

- Welcome and assign new members manually
- Review every post for spam or policy violations
- Send event recommendations one by one
- Operate with little visibility into community health

WHY is it important?

Community managers spend 4–6 hours daily on repetitive operational tasks. A single moderation mistake can reduce trust and engagement. As communities grow, these challenges scale rapidly.

There is no intelligent automation layer built specifically for community operations.

Solution

What

ORBIT is a four-agent AI system that fully automates tech community operations — intelligently, autonomously, and with a human approval layer built in for critical decisions.

How

Four specialized AI agents work together 24/7:

- Onboarding Agent — Assigns members to the right chapter and generates welcome messages
- Moderation Agent — Reviews posts and requests human approval when confidence is low
- Event Agent — Recommends relevant events based on member interests
- Insights Agent — Generates community health reports and signed verifiable credentials

Key Features

- **FEATURE 1 — AgentField Reasoners**
 - Structured AI functions with typed JSON outputs
 - Clean and reusable reasoner endpoints
- **FEATURE 2 — Human-in-the-Loop (HITL)**
 - When confidence falls below 70%, the agent pauses and requests human approval before taking action.
- **FEATURE 3 — Cross-Agent Calls**
 - The Insights Agent gathers live data from all other agents through runtime cross-agent calls.
- **FEATURE 4 — Shared Memory**
 - All agents share a global key-value memory store.
 - Data written by the Onboarding Agent is read by the Event Agent to personalize recommendations.
- **FEATURE 5 — Verifiable Credentials (Audit Trail)**
 - Every community health report is cryptographically signed— tamper-proof, verifiable, and permanently logged.

Demo / Product

Dashboard

Live ORBIT Dashboard

- Dashboard — Real-time community health and engagement metrics
- Onboarding Agent — Automatically assigns members to the correct chapter
- Moderation Agent (HITL) — Flags uncertain content for human approval
- Event Agent — Generates personalized event recommendations

Demo Flow:

Member Joins → Onboarding → Moderation Review → Event Recommendation → Insights Report.

Build Process

• TECHNOLOGY STACK:

- AgentField SDK — Core multi-agent framework (required ✓)
- Google Gemini 2.5 Flash — LLM powering all 4 agents (free tier)
- Python + FastAPI — Agent orchestration and backend services
- React + Vite + TypeScript — Operator terminal dashboard
- Vercel — Live deployment

• AGENTFIELD FEATURES USED:

- `@app.reasoner` — AI-powered typed output functions
- `app.pause()` — Human-in-the-Loop approval gate
- `app.call()` — Live cross-agent communication
- `app.memory` — Global shared memory across all agents
- `vc_enabled=True` — Cryptographic audit receipts

Impact & Use Case

- **PRIMARY USE CASE:**

- Indian tech communities — GDG chapters, college tech clubs,
- developer collectives like Agentic Devs Collective —
- can run their entire operations through ORBIT.

- **MEASURABLE IMPACT:**

- 4-6 hours/day saved per community manager
- Under 2 seconds onboarding response time (vs 24-48 hours manually)
- Every post receives automated AI moderation before approval
- 100% audit trail for every agent action — signed and verifiable

- **SCALE POTENTIAL:**

- Applicable to 500+ Indian tech communities
- Plug-and-play for any community regardless of size
- Multi-language support ready to be added

- WhatsApp bot integration for member interactions
- Deploy on production AgentField infrastructure Hindi and regional language support
- Predictive churn detection and retention alerts
- Voice-based onboarding for non-English speakers
- AI-generated event planning from community interest trends
- Integration with Luma, Meetup, and LinkedIn Events
